ROUND ONE · SEED ASK · LEAD INVESTOR

$5,000,000 Seed Round

for Lyndon Rive

A standalone one-pager for the lead-investor conversation — kept separate from the Founder Pack so it can be shared, printed, or sent without exposing the 100-year thesis. This is the last raise required to reach default-alive if growth tracks to plan.

24 mo
Runway @ $0 revenue
Fully-loaded burn incl. founder pay

$208K
Monthly burn
$5.0M ÷ 24 mo · disciplined

Q2-Q4 '27
Series A target
$80–120M post · metrics-triggered

The 24-month figure assumes zero revenue. Subscriptions, transfer tax, OEM licensing, and NFT mint fees extend runway materially when live.

02 · CAPITAL DEPLOYMENT

$5.0M · 24-Month Runway

Allocated to ship the protocol, defend the IP, and reach Series A readiness.

LINE ITEM	AMOUNT	SHARE	DETAIL
Founder compensation	$875,000	17.5%	Joseph $500K · Michael $375K
Senior engineering (3 FTE)	$1,100,000	22.0%	Protocol · Mobile · Verification
Legal & IP prosecution	$420,000	8.4%	Patents · SEC · contracts
API & infrastructure	$285,000	5.7%	Tesla · Enphase · Base L2
Smart-contract audits	$250,000	5.0%	Two full audits + bounty pool
Marketing & growth	$650,000	13.0%	Optional accelerant — see p. 5
Operations & G&A	$420,000	8.4%	Accounting · insurance · tooling
Compliance & tax counsel	$300,000	6.0%	Token classification · audits
Reserve / contingency	$700,000	14.0%	Buffer for opportunistic hires
TOTAL	**$5,000,000**	**100%**	24-month runway, $0 revenue

MONTHLY BURN MATH

$5,000,000 ÷ 24 months = $208,333 / month fully-loaded.

Revenue streams (subscription, transfer tax, OEM licensing, mint fees) extend this materially.

03 · THE DUAL-RAIL FLYWHEEL

Subscription Revenue + LP Auto-Injection

Every paid subscription splits 50/50 via smart contract: half to company bank, half to the $ZSOLAR LP.

TIER	PRICE	DESCRIPTION
Manual minting	**$9.99 / mo**	Tap-to-Mint™ on demand. Verified rooftop owners.
Daily automation	**$19.99 / mo**	Auto-mints daily. Premium tier · power users.

50% · COMPANY BANK

Traditional SaaS revenue

Books cleanly · GAAP-friendly · ARR multiple

50% · LP AUTO-INJECTION

On-chain · transparent

Compounds depth · drives price drift

Revenue at scale · blended ARPU $13.49/mo

Assumes 65% on $9.99 manual / 35% on $19.99 automated. Each side of the split = $6.745 / sub / mo.

PAID SUBS	MRR (TOTAL)	COMPANY ARR	LP / YEAR	FLYWHEEL STATE
1,000	$13,490	**$80,940**	**$80,940**	Pre-flywheel
5,000	$67,450	**$404,700**	**$404,700**	Approaching
7,500	$101,175	**$607,050**	**$607,050**	Net-positive
10,000	$134,900	**$809,400**	**$809,400**	**Series A trigger**
25,000	$337,250	**$2,023,500**	**$2,023,500**	Compounding

FLYWHEEL BREAK-EVEN · ~6,200–7,500 PAID SUBS

Above this threshold, monthly LP injections exceed the ~30% sell-pressure from active mint redemption. Net buy-side pressure → steady upward token price drift.

04 · CAPITAL IS THE FLYWHEEL'S FUEL

Where Your Capital Lands the Flywheel

Each round's LP allocation directly sets the user threshold at which the protocol self-sustains. Capital here is not burned — it becomes a permanent, appreciating LP asset.

FLYWHEEL TRIGGER: LP monthly injection ≥ 30% sell-pressure · LP depth ≥ 10× monthly sell volume
Assumes $19.99 sub · 50% to LP · ~75 tokens/user/mo minted · 30% sold monthly · price-stable within ±2% per cycle.

ROUND	RAISE	LP ALLOC.	CUM. LP	FLYWHEEL TRIGGERS AT	PRICE FLOOR
Seed (now)	$5.0M	$1.0M (20%)	$1.0M	~6,500 paid subs	$0.10 – $0.15
Series A	$20.0M	$6.0M (30%)	$7.0M	~22,000 paid subs	$0.40 – $0.75

SEED LANDS US AT 6.5K SUBS

$1.0M LP seed sustains a stable $0.10–$0.15 floor and lets the flywheel self-trigger inside the 10K-rooftop Series-A milestone.

Monthly LP injection at trigger:
6,500 subs × $10 = $65K/mo
Monthly sell-pressure absorbed:
~$60K/mo (30% of mint value)

SERIES A LANDS US AT 22K SUBS

$7.0M cumulative LP supports a $0.40–$0.75 floor while absorbing institutional-scale sell flow as the protocol scales to 100K+.

Monthly LP injection at trigger:
22,000 subs × $10 = $220K/mo
Monthly sell-pressure absorbed:
~$200K/mo (30% of mint value)

DISCRETIONARY LP INJECTION LADDER · CAPITAL DEPLOYED ON METRIC TRIGGERS, NOT CALENDAR

Manual USDC injections are pre-authorized by the board only when the trigger condition below is met. Source legend below.

SEED LP ALLOCATION · TREASURY RESERVE · COMPANY BANK (ARR)

#	TRIGGER CONDITION	ACTION	AMOUNT	SRC
01	Mainnet launch · Day 0	**Seed pool live**	$200K + 2M tokens @ $0.10	
02	Spot ≥ $0.10 for 14 days · daily vol > $25K	**Round 2 injection**	$200K + 2M tokens	
03	Spot ≥ price-discovered floor for 14 days (repeat)	**Rounds 3–5 (paced)**	$200K each + matched toke	
04	Sell-pressure > 30% of LP depth (7-day window)	**Defensive injection**	$150K USDC (no tokens)	
05	ARR ≥ $500K · within 30d of break-even	**Accelerator injection**	$200K + 1.5M tokens	
06	Flywheel net-positive 30 consecutive days	**Pause manual injections**	Sub auto-flow	

BEYOND SERIES A
Series B (~$15M to LP) → ~75K subs @ $1.50–$3.00 floor · Series C (~$40M to LP) → ~250K subs @ $5–$10

Source: ZenSolar internal model · 50/50 split · 30% sell-pressure assumption.

05 · WHAT $5M UNLOCKS

Milestones, Terms & Why Now

Milestones unlocked

Q4 2026	10,000 verified rooftops minting $ZSOLAR on Base L2
Q1 2027	OEM licensing deal signed with tier-1 inverter partner
Q1 2027	Subscription flywheel net-positive (LP > sell-pressure)
Q2 2027	Patent continuations issued; defensive moat locked
Q3 2027	$1M+ ARR from subscriptions + transfer tax
Q4 2027	Series A at $80–120M post — default-alive

Lead investor terms

Check size	$2.0M – $3.0M of the $5.0M round
Valuation	$25M post-money SAFE (MFN)
Token warrant	0.5% of $ZSOLAR supply at launch price
Board	One observer seat through Series A
Pro-rata	Full pro-rata rights through Series B
Info rights	Monthly KPI dashboard + quarterly call

WHY NOW · THE 100-YEAR THESIS

Every rooftop solar panel, home battery, and electric vehicle on the planet is a verifiable clean-energy meter that no one has tokenized. ZenSolar turns the entire daily renewable and clean-tech stack — generation, storage, and electrified miles — into programmable currenc EV miles and charging kWh are pulled directly from OEM telemetry (Tesla, Ford, GM, Wallbox) - human-driven miles only, autonomous/FSD excluded — and minted at the same per-kWh rate a rooftop generation. Defensible via patented multi-source verification, durable via smart-contract transfer tax, and compounding via OEM distribution across solar, battery, and EV partners. This is the seed round that makes it inevitable.

Joseph Bravo, Founder & CEO · Michael Bravo, Co-Founder & COO

06 · THE NEXT INFLECTION

Series A · $20M at $80–120M post

Anticipated Q2–Q4 2027 — 6–12 months after mainnet, when the four triggers below clear.

$20M
Target raise
Standard 20–25% dilution band

$80-120M
Post-money range
Bull case if OEM revenue signed

Q2-Q4 '27
Expected window
Triggered by metrics, not calendar

Series A triggers — all four must clear

01 **Verified rooftops**
10,000+ rooftops actively minting $ZSOLAR on Base L2

02 **Annual recurring revenue**
$1M+ ARR — subscriptions (50% co. side) + transfer tax

03 **OEM distribution deal**
1+ tier-1 inverter or installer partnership signed

04 **IP moat**
Patent continuations issued; defensive position locked

FOUNDER'S NOTE · MARKETING AS OPTIONAL ACCELERANT

We anticipate hitting the four triggers within 6–12 months of mainnet — and we expect to do so without deploying the full $650K marketing allocation. The product is categorically novel: turning your roof into programmable currency is the kind of story that compounds through word-of-mouth, referral, and grassroots virality. The marketing budget exists as an accelerant, not a dependency.

WHAT THIS MEANS FOR THE LEAD

Seed entry at $25M post · Series A markup to $80–120M post = ~3.2–4.8× paper return
before token warrant value or pro-rata participation in the A.

07 · WHEN OUTSIDE CAPITAL BECOMES OPTIONAL

The flywheel can outgrow the cap table.

Once subscription LP inflow exceeds 30% sell-pressure, every new paid sub strengthens the pool instead of draining it. Series B+ becomes an accelerant, not survival oxygen.

~6,500
Flywheel break-even
Subs at which 50% MRR > 30% sell pressure.

~75K
No-Raise Zone
ARR self-funds Series B-sized LP every ~5 mo.

100K+
Waitlist signal
Demand outpaces release — PMF locked in.

The self-funding crossover

At ~50K paid subs (~$5M ARR), 50% of MRR routes ~$208K/month into the LP automatically — a Series B-sized injection every five months, paid by users, not investors. Beyond that, the LP deepens faster than discretionary capital ever could, and price defense stops requiring board action.

The waitlist as a release valve

A gated waitlist of 100K–500K becomes a monetary tool we control. Access drips out in tranches matched to LP depth — every release converts to guaranteed subs, guaranteed LP inflow, and scarcity-driven token demand. Robinhood, Superhuman, and Clubhouse used this playbook; ours layers a tokenomics multiplier on top.

WHAT THE NO-RAISE ZONE UNLOCKS FOR THE LEAD

Series B/C/D become elective — pursued only for acquisitions, moats, or geographic expansion.

Lyndon's seed position compounds without further dilution — a self-sustaining machine, not a serial-raise treadmill. Every future round becomes a strategic choice, not an existential one.
