ROUND ONE · 24-MONTH RUNWAY

$4.5M Seed Round

for Lyndon Rive

Patent-protected energy verification protocol · Phase 1 of a 100-year thesis · Lead investor designation reserved

24 months	$187.5K	Q2 2028
RUNWAY @ ZERO REVENUE	**MONTHLY BURN**	**SERIES A TARGET**
Fully-loaded burn including founder salaries	$4.5M ÷ 24 months, all-in	Raised at $40–60M post-money

The 24-month figure assumes $0 revenue. ARR from subscriptions ($9.99/mo), transfer-tax accruals (7% on every $ZSOLAR transfer), OEM licensing, and NFT mint fees extend runway materially. We treat this round as the **last raise required to reach default-alive** if growth tracks our base case.

WHY NOW. The patent is filed. Phase-1 product is live in beta. The Family Legacy Pact is signed. We are not raising to discover product-market fit — we are raising to **execute against an inevitability**. Lyndon, you built SolarCity. We built the verification layer that sits on top of it — and on top of every device Tesla, Enphase, SolarEdge, and the next 50 OEMs will ship. **This is the entry round.**
